

## **Medical Evacuation of Uterus (Incomplete)**

Your treatment has begun to work successfully but is not yet complete.

The doctor has agreed that you may return home but you should expect to continue to bleed to complete the procedure; you should ring the ward on 01234 792219 to seek advice if:

- You experience heavy bleeding and have to change your pad every hour or pass large clots.
- You experience severe pain that is not controlled by simple pain relief, i.e. Paracetamol.
- Your bleeding starts again after it has stopped.
- Your bleeding becomes offensive smelling and/or you become feverish.

To determine if the procedure has completed you should do the pregnancy test in three weeks time. If this is positive please call 01234 792007 in office hours.

Please remember not to use tampons until after your next normal period.
