

Treatment with EFUDIX[®] (fluorouracil) cream

You have been prescribed a special cream (called EFUDIX[®] or fluorouracil) for the treatment of your skin condition. **It is important that you follow these instructions carefully:**

Week 1

Apply the cream **TWICE DAILY** to the affected area of the skin.

Week 2

Do not apply any cream.

Week 3

Apply the cream **TWICE DAILY** to the affected area of the skin.

Week 4

Do not apply any cream.

Week 5

Apply the cream **TWICE DAILY** to the affected area of the skin.

Week 6

Do not apply any cream.

In order to avoid confusion, it is best to mark the treatment on your calendar.

During treatment, the treated skin will become very inflamed and 'angry looking'.
DO NOT BE ALARMED. This is a normal reaction to the cream.

Keep the skin dry and if possible open to the air during treatment. When the treatment is completed, the treated area will form a dry scab which will heal from underneath.
